

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

3. The Mouth very little, without Teeth in the upper Jaw, except this *Dens prominens*, or Tusk; which has by some been taken for a Horn: And there was no lower Jaw found.
4. The Eye, very small.
5. The Fin on the right Side, which, as well as the opposite, is fleshy.
6. The Tail fleshy, like the Fins; which, taken according to its Width, is not vertical, but horizontal.
7. The prominent Tooth or Tusk, generally taken for a Horn.

The Length of this *Narhual* from N<sup>o</sup> 3 to 6, was measured, and found to be 17 Feet 9 Inches.

The Tooth six Feet three Inches.

The greatest Thickness, measured round, was 14 Feet.

The Skin was smooth, without Scales, like that of an Eel; and was white mark'd with blackish Spots.

### III. *A Description of the same Narhual, communicated by John Henry Hampe, M. D. F. R. S.*

**I**N a Creek called the *Beluhmer Wadt*, belonging to the Bailiwick of *Newhaus* in the Dutchy of *Bremen*, hath been caught alive, an unknown Fish of a large Size, 18 to 20 Feet in Length, and four in Diameter. He hath on the Fore-part of the Head, just above the Mouth, which is very small, a Horn six Feet long, white like Ivory, and curiously twisted. The Body is white, sprinkled with black Spots, and smooth like an Eel. The Head is in Proportion to the Body,  
very

very small, about 16 Inches in Length, and the same in Diameter. The Eyes are also small, about the Bigness of a Sixpence. On the upper part of the Head, is a Hole about three Inches in Diameter, out of which probably he spouts Water, like the Whales. On each Side of the Neck are placed two black Finns, one above another, and at a small Distance from one another. They are half an Inch in Thickness, of one Hand's Breadth, and two Feet in Length, round on the Fore-part all fleshy, and of a Liver-colour.

---

IV. Insectum Aquaticum, *antea non descriptum, cujus Iconem & Descriptionem ad Illustr. D<sup>m</sup> Hans Sloane, R. S. Præs. misit Dom. Jacobus Theodor. Klein, Reipubl. Gedan. à Secret. & R. S. Lond. S.*

**I**NSECTUM aquaticum, cujus iconem trado, Uderwangæ in Borussia Orientali inter astacos lacustres repertum, hominibusque astacos venantibus plane ignotum, amicus singularis D. B. tum temporis Uderwangæ commorans, pro museo meo conservatum, redux mihi tradidit.

Ob magnum numerum pedum, & mira facilitate mobilium, *Scolopendram Aquaticam Scutatam* pari, si non meliori, jure, quo Aldrovandus piscem quendam cetaceum, *Scolopendram Cetaceam* (de Cætis pag. 721.) insignivit, appellare liceat.
